1. About this document

Please read carefully and keep in a safe place.

- Under copyright. Reproduction either in whole or in part only with our consent.
- Subject to change in the interest of technical progress.

Symbols

Hazard warning!

Reference to other information in the document.

2. General Safety Notification

Disconnect the power supply before attempting any work on the unit.

- During installation, the electric power cable to be connected must not be live. Therefore, switch off the power first and use a voltage tester to make sure the wiring is off-circuit.
- Installing the sensor involves work on the mains power supply.
This work must therefore be carried out professionally in accordance with national wiring regulations and electrical operating conditions. (**DE** - VDE 0100, **AT** - ÖVE / ÖNORM E8001-1, **CH** - SEV 1000)
- Only use genuine replacement parts.
- Repairs may only be made by specialist workshops.

3. iHF 3D

Proper use

- The iHF 3D sensor is an active motion detector for wall mounting outdoors.

The iHF 3D sensor emits high-frequency electromagnetic waves (5.8 GHz) and receives their echo. Any movement by persons in the detection zone is noticed by the sensor as a change in echo and triggers a switching signal. Analysing the signal, the iHF 3D sensor distinguishes between moving persons and moving

objects, such as bushes or small animals (animals up to the size of a cat). The 3D antenna system permits precision adjustment in any way in three directions. This rules out any inadvertent triggering by small animals as well as interference from extreme temperatures. All function settings can also be made via the RC9 remote control. (→ **"7. Accessories"**)

Note: The high-frequency output of the iHF-sensor is approx.1 mW – that's 1000 times less than the transmission power of a mobile phone or the output of a microwave oven.

Package contents (Fig. 3.1)

Product dimensions (Fig. 3.2)

Mounting height / reach (Fig. 3.3)

Product components (Fig. 3.4)

- E 3D reach setting
- F Light-level setting
- G Designer cover panel

4. Installation

- Switch OFF power supply (Fig. 4.1)

Wiring diagram (Fig. 4.2)

Connect the mains power supply lead (Fig. 4.3)

The mains supply lead is a 3-core cable (max. lead diameter 19 mm):

- L** = phase conductor (usually black, brown or grey)
- N** = neutral conductor (usually blue)
- L'** = live conductor (usually black or brown)

If you are in any doubt, identify the conductors using a voltage tester; then disconnect from the power supply again. Connect phase (**L**) and neutral conductor (**N**) to the terminal block.

Please note that the electric circuit must be protected by a 16A circuit breaker.

Important: Incorrectly wired connections will produce a short circuit later on in the product or your fuse box. In this case, you must identify the individual conductors once again and re-connect them. A mains power switch for

turning the unit ON and OFF may of course be installed in the mains supply lead.

5. Mounting

- Check all components for damage.
- Do not use the product if it is damaged.

Mounting procedure

- Select appropriate site of installation, giving consideration to sensor reach and detection of movements (Fig. 3.3)
- Switch OFF power supply (Fig. 4.1)
- Mark drill holes (Fig. 5.1)
- Drill holes and insert wall plugs (Fig. 5.2)
 - Concealed power supply lead (Fig. 5.2)
 - Surface-mounted power supply lead (Fig. 5.3)
- Connect conductors (Fig. 4.2)
- Make plug connection (B) (Fig. 5.4)
- Screw sensor unit (C) into place (Fig. 5.5)
- Switch ON power supply (Fig. 5.6)
- Make settings → "6. Operation"

6. Operation

Operation/function legend (Fig. 6.1)

Note: After connecting to the mains power supply, the white Status-LED flashes for 10 s. The sensor is then ready for operation.

Factory settings

Time setting: Install (pos. 8)
Reach setting: 3x MAX
Light-level setting 1000 lux (pos. 7)

Functions

Time setting (Fig. 6.2 / H)

The time you wish the connected load to stay ON for can be adjusted to any of six settings: 30 seconds, 1 minute, 2 minutes, 5 minutes, 15 minutes to 30 minutes.

Pulse mode (Fig. 6.2 / H)

If you set the control dial to  (pos. 1), the unit is in pulse mode, i.e. the output is switched ON for approx. 2 sec. (e.g. for staircase lighting timer). Afterwards, the sensor does not react to movement for approx. 8 s.

Install mode (Fig. 6.2 / H)

Install mode has the purpose of checking for proper working order as well for testing the detection zone. Irrespective of light level, the light connected switches ON for 10 s in response to movement (Status-LED flashes). Install mode has priority over all other settings. Change control dial setting to quit Install mode. When making settings with the RC9 remote control, Install mode ends automatically after 10 min.

Reach setting (Fig. 6.2 / I 1-3)

Reach can be infinitely adjusted in three directions via three control dials from 1-5 m (max. approx. 7 m) independently of each other. The maximum detection reach is selected via the control dials.
Detection diagram (Fig. 6.3)

Note: if the distance to a wall or similar structure is less than 7 m in any of these directions, the reach in that direction must still be set to maximum reach or detection errors may be made. The reach settings should only be used to mask out areas in which you do not want movement to result in light being switched ON. Performance of the iHF 3D may also be impaired by installing it in corners or on metal building exteriors.

Light-level setting (Response threshold) (Fig. 6.2 / J)

The sensor's chosen response threshold can be infinitely varied from approximately 2 to 1000 lux.

Teach mode

Teach mode (Fig. 6.2 / J / pos. 8) saves the current ambient light level below which you do not want the sensor to respond to movement from now on.

Manual override function (Fig. 6.4 / 6.5)

If a mains switch is installed in the mains supply lead, the following functions are provided in addition to simply switching light ON and OFF:

Sensor mode: (Fig. 6.4)

- Switch light ON (when light is OFF):
- Switch OFF and ON once. Light stays ON for the period selected.
- Switch light OFF (when light is ON):
- Switch OFF and ON once. Light goes out or switches to sensor mode.

Manual override (Fig. 6.5)

- **Activate manual override:**
 - Turn switch OFF and ON twice. The light is set to manual override for 4 hours (Status-LED ON). Then it returns automatically to sensor mode (Status-LED OFF).
- **Deactivate manual override:**
 - Switch OFF and ON once. Light goes out or switches to sensor mode.

Important: The switch must be actuated in rapid succession (in the 0.2 - 1 s range).

7. Accessories

Remote control RC9 (EAN 4007841007638)

Any number of iHF 3D sensors can be controlled by the RC9 remote control. The Status-LED on the sensor flashes (once) to indicate each valid press of the button. The Status-LED flashes (twice) to indicate each valid press of the button. (Fig. 7.1)

Functions:

Light-level setting

 **1** The chosen response threshold can be set from approx. 2-1000 lux.

2 Daylight operation

3 Night-time operation

4 Manual mode

This button must be pressed at the level of light at which you want the sensor to respond to movement from now on.
The current value is stored.

5 Time setting

The period of time you want the light to stay ON for after the last detected movement can be set to 10 s, 1 min, 5 min, 15 min by pressing these buttons.

6 Light ON time

Setting the light to stay ON for a time of your own choice. Each press of the button increments the current time setting by 1 min (up to 30 min).

7 Manual override function

Pressing this button switches the light ON for 4 hours (Status-LED on). The light then returns to sensor mode automatically. Pressing the button for a second time (before the 4 h period expires) returns the light to sensor mode.

8 Install mode

Install mode has the purpose of checking for proper working order as well for testing the detection zone. Irrespective of light level, the light switches ON for 10 s in response to movement. (Status-LED flashes).
Install mode has priority over all other settings. Install mode ends automatically after 10 min. Install mode ends immediately after pressing reset.

Note: Teach mode and Install mode cannot be used at one at the same time.

9 Reset

Resets all settings to the values selected on the light manually or to the factory settings.

Smart Remote (optional)

(EAN 4007841009151)
– Control by smartphone or tablet
– Replaces remote control
– Load appropriate app and connect via Bluetooth

8. EC Declaration of Conformity

STEINEL Vertrieb GmbH hereby declares that the iHF 3D conforms to Directive 2014/53/ EU. The full wording of the EU Declaration of Conformity is available for downloading from the following Internet address:
<http://www.steinel.de> <http://www.steinel.de>

9. Disposal

Electrical and electronic equipment, accessories and packaging must be recycled in an environmentally compatible manner.

Do not dispose of electrical and electronic equipment as domestic waste.

For EU countries only: under the current European Directive on Waste Electrical and Electronic Equipment and its transposition in national law, electrical and electronic equipment no longer suitable for use must be collected separately and recycled in an environmentally compatible manner.

10. Warranty

As purchaser, you are entitled to your statutory rights against the vendor. If these rights exist in your country, they are neither curtailed nor restricted by our Warranty Declaration. We guarantee that your STEINEL Professional sensor product will remain in perfect condition and proper working order for a period of 5 years. We guarantee that this product is free from material-, manufacturing- and design flaws. In addition, we guarantee that all electronic components and cables function in the proper manner and that all materials used and their surfaces are without defects.

Making Claims

If you wish to make a claim, please send your product complete and carriage paid with the original receipt of purchase, which must show the date of purchase and product designation, either to your retailer or contact us at **STEINEL (UK) Limited, 25 Manasty Road, Axis Park, Orton Southgate, Peterborough, PE2 6UP**, for a returns number. For this reason, we recommend that you keep your receipt of purchase in a safe place until the warranty period expires. STEINEL shall assume no liability for the costs or risks involved in returning a product.

For information on making claims under the terms of the warranty, please go to www.steinel-professional.de/garantie

If you have a warranty claim or would like to ask any question regarding your product, you are welcome to call us at any time on our Service Hotline **01733 366700**.
